AutoCAD Serial Key also supports a large number of languages for programming. These include Autocad JavaScript, MSXML, ASP, VBScript, PHP, ColdFusion, C#, and Ruby. Since AutoCAD 2017, Autodesk has released an HTML5 application named "AutoCAD", which can be downloaded for free from the official website and used as a

web client, but does not have AutoCAD functionality. The application is proprietary and allows users to edit and view drawings in a web browser, and save them in PDF or JPEG formats. This has led to criticism from users and developers, who say the application is only useful for simple tasks, and is a departure from AutoCAD's openness. AutoCAD components AutoCAD contains extensive components, some of which are shipped with the program, and some are shipped as AutoCAD Add-ons. The program contains more than 200 components, which can be categorized into four major groups: The Visual LISP components of AutoCAD. The editor components that allow users to edit, annotate, and import drawing elements. Third-party AutoCAD Add-ons. The Office components of AutoCAD. Visual LISP Visual LISP is a proprietary programming language developed by Autodesk that is used to script or customize the behaviour of AutoCAD. It is similar to the programming languages of other CAD software, and can be compared to the Visual Basic, Visual J#, and Microsoft Visual C#.NET programming languages of Microsoft Windows applications. Visual LISP scripts are compiled into Common Intermediate Language (CIL). In addition, Visual LISP code can be integrated into AutoCAD in two ways: The LISP language can be imported and used directly in the Visual LISP editor component. In this case, the LISP code is written in a window that appears in the standard toolbar. Alternatively, the LISP language can be used as an interface between programs or libraries written in C#, Visual Basic, VB.NET, JavaScript, Visual J#, Delphi, or other Visual LISP compliant languages. Visual LISP is the most commonly used programming language in AutoCAD. In recent years, Visual LISP programming has found its way into other Autodesk applications.
