I downloaded it to see how it would handle my partition that i split into several. I couldn't figure it out, so i searched for a tutorial for this program and i found a step by step that i simply followed. Anyway the program worked great! I can't explain how relieved i was that it worked, and even though the program is basic, i can't wait to use it again. Umm... I like it, but it made my hard drive unreadable. I had to boot up in Windows with my original installation disk to fix it. The game sims was on a drive that was erased after using it, so it was gone. So, don't recommend it if you want to save anything. Full Review DiskExplorer for FAT helps users browse the contents of their drives and explore the partition table and boot record. More than 80% of the world's population relies on the practice of blood donation to offset the shortage of blood for transfusion. Primary school children are an un-exploited group of potential donors. To ascertain the proportion of pre-pubertal children who have a capacity to donate blood. The heights of 7-11 year-old children attending four randomly selected state schools in two districts in the Central Province, Sri Lanka were measured. There were 4491, 4358, 4238 and 4215 children with corresponding mean heights of 149.5, 149.6, 149.1 and 149.3 cm. No significant correlation existed between mean heights and the sex. Of 752 children with corresponding means and ranges of heights, 13.5% had heights falling between 138 and 140 cm (lower BMI for girls, 6-8 years old), and 15.5% between 142 and 144 cm (3-5 years old, lower BMI for girls, 6-8 years old). One hundred and fifty-eight (26.0%) of the children were overweight. The prevalence of overweight children with heights between 138 and 140 cm (14.1%) was similar to that of the total sample and overweight children of any age. A prospective study involving 1660 children with comparable growth data is underway to further explore the body composition and anthropometry of children and their ability to donate blood.
