Password Reuse: Yes * SHA1/MD5 algorithm: No * SHA1/MD5 algorithm: Yes * Portable version of the application: No * Portable version of the application: Yes * "Do not backup to e-mail" option in the settings menu: No * "Do not backup to e-mail" option in the settings menu: Yes * Setting to delete the encrypted files after they are decrypted: No * Setting to delete the encrypted files after they are

decrypted: Yes * "

Strong encryption passwords are not just for specialists, but also for everyone who needs to create secure passwords, because many passwords are too easy to guess, and most of them are not secure against a malicious third-party with the access to the computer. Create strong

passwords just by one click This application provides a quick way to generate strong and secure passwords. Users will be able to create one password from a set of existing password, or from the created password from the previous ones. Keymacro allows you to quickly create secure and strong passwords, simply by selecting the difficulty level you prefer and copying all

the created passwords. It's designed to be a multi-purpose password tool, in fact it can also encrypt important files to protect them from unauthorized access. It is also able to change the name of multiple files at once or to extract their names to a file. Screenshots: What's New in This Version: Version 1.2: Bug fixes and improvements. Screenshot: You just installed upsecrypt,

you may wonder: "How do I use it?" Get help from the How to Use documentation. Download: How to Use: Upsecrypt lets you create passwords that are strong and secure, but just as easy to type. Just a couple of clicks and you will have a bunch of strong passwords ready to use. Upsecrypt works with your existing set of passwords and can create passwords from them. This way it will create strong,

complex, and unique passwords for you. Simply select the difficulty level you prefer. Your passwords will be automatically saved and you will be able to immediately access them. You can also easily use the passwords in other programs. Upsecrypt can encrypt important files to protect them from unauthorized access. To do that, simply select the files you want to protect, copy

and paste the password and click on "Encrypt". If you want, you can encrypt or change the name of multiple files at once by simply copying and pasting the password in the next window. If you don't like the generated passwords you can copy all of them and paste them in the next window to quickly create and copy new passwords. Some Options: Password choice: At the very

beginning, you will have a number of password choices. They are ordered by the difficulty level, and each will consist of a randomly generated and unique letter and digit combination 1d6a3396d6

The whole system of Security of your data. Keyboard and mouse. Automatic typing and copy of file. Password generator. Password and file encryption. Encryption of files or data. Selectable encryption level. With the help of this application, you can put an end to the hassle of using the same password. By using this product, you

can easily create strong passwords that will be very hard to crack. You can also save passwords from multiple web sites in order to have access to the sites, regardless of the site you are using. Description: The whole system of Security of your data. Keyboard and mouse. Automatic typing and copy of file. Password generator. Password and file encryption. Selectable encryption level. Now you

can create, view, edit and send encrypted text messages with the TextSecure app. This one-of-a-kind messaging app was designed to keep your personal and private messages secure, by employing end-to-end encryption. It can be used to send encrypted messages to a group of people. You can also use it to encrypt personal and sensitive text messages, or to share them

with people who don't have the app installed. Features # End-to-end encrypted messaging # Great new feature: you can create group chat with 3 people or more # Original, confidential and secure design, no third party can access your messages # No app server involved, you control and see what happens with the message # You can also request the specific decryption key, so

you can safely read and respond to your messages # Choose how often the encryption keys are re-generated # Message copy, file attachments, QR codes and more # In case the recipient forgets to read the message, you can send them a notification # Several configuration options to customize the app's behavior # New: group chat messages can be generated for multiple recipients #

New: encrypt the email address before sending the message # New: specify how the group key is re-generated in Settings # New: clear all keys and import a new group key This application is a handy and straightforward tool for switching mobile and Wi-Fi networks. It works by connecting with your phone to the WiFi network on which it is installed and then it will switch automatically

the mobile data connection to your computer. Why use this application? It's completely free. You can switch
