The tough tattooed former addict is a complete change of pace for the park staff who had only seen docile animals before and are relying on him to help thwart off poachers. The teenager, who has since quit drugs, is learning to track the zebra herd and they trust him to warn them of danger. He is learning about the animals and their movements. They trust him to warn them of danger. He is learning about the animals and their movements. The anti-poaching unit, run by Lyn Harding at Aberfoil in South Africa, has seen a sixfold increase in poaching in the last 12 months. Harding has begun taking on the role of 'mother hen' for the entire herd, and said: 'I think as a mother hen I can look after them and they can trust me to look after them.'Q: Adding picture to email in PHP I'm writing a very basic email system and I'm using a WHMCS template with my site. The code I

have for creating the email in PHP is: \$body = "Dear { \$name },\r ". "The { \$subject } ". \$description. "\r ". "Has been approved, please download the attached file ". \$file. "\r ".

"Regards,\r ". \$email; I have also tried: \$body = "Dear { \$name },\r ". "The { \$subject } ". \$description. "\r ". "Has been approved, please download the attached file ". \$file. "\r ".

"Regards,\r ". \$email; Which was included in the template I'm using. The email looks great when it's downloaded from my site, but it is stripped of the images. I can attach a jpeg image in Word as an attachment, but can't get it to work when I'm sending it from PHP. If I do: \$body = "Dear { \$name },\r ".

"The { \$subject } ". \$

It turns out I had done exactly what I'd been recommending for most of my recent tutorials. I'd converted some files using libmobi, and it was going very well. Then I'd checked them in to a source control system. When I'd pulled them back out again, they were there with the expected name and timestamp, but they weren't actually converted, and there was no indication of what had been done or why. It turns out that if you're using the Mobi Batch Converter (which converts.mobi files to.azw) to put them in to a.azw file then open the file with a text editor, and change the line "--output-dir=*" to "--output-dir=*~" it will delete all those files when you run the command and leave you with a single.azw file.

About the icon: I used this icon as a hint, but actually I didn't make it. I made the rest of the program and then found this icon and put it into the icon bundle. So you shouldn't change this. In all the video tutorials I do, I try to keep the budget pretty tight, so don't worry if you find that I'm spending more time making the program look nice than in

actually explaining what it does. In the next video tutorial, I'm going to show you how to set up the Mobi Batch Converter to work on your Linux system. BatchConverter Overview: It turns out
